

Carbon Consulting

OVERVIEW

Surpass your sustainability goals.

Lowering your organization's carbon emissions can feel like a daunting task. Luckily, our teams are here to lead the way. Whether you're taking the first steps to meet compliance targets, exploring different plans to reach net zero or searching for a partner to get the job done, we're ready to jump right in and get to work.

Let us lead the way.

We take a five-step approach to carbon consulting that allows us to guide you through the entire journey from end to end or offer support at any stage.

① Measure

Get the full picture of your current carbon footprint, including measurements, modeling and reporting on which parts of your operations output the most carbon emissions today.

② Discover

Based on your measurements, we'll search for new opportunities to reduce your annual carbon output and make specific recommendations on where to focus next.

③ Plan

Once you've chosen your first focus areas, our teams will work together to set realistic reduction goals and put a plan in place to achieve them.

④ Reduce

With your plan in place and people aligned, it's time for us to get to work lowering your energy use and carbon output year after year.

⑤ Improve

From ongoing system checkups to choosing your next reduction target, we'll be by your side every step of the way to keep your sustainability goals on track.

Key areas of focus

Behavior

Saving energy often starts with simple behavioral changes to use less each day.

Equipment

Upgrading outdated equipment to certified, energy-efficient models ensures your savings last.

On-site generation

Producing on-site renewable energy is likely easier and more affordable than you think.

Offsets

Purchasing carbon offsets for any remaining energy usage lets you reach your goals with ease.

We change the way people use energy, *for businesses.*
